General Description

LE2640R2FAU is a Bluetooth 5.1 single-mode compliant Bluetooth low energy module targeted at low power sensors and PC/Phone accessories.
LE2640R2FAU0/LE2640R2FAU4/LE2640R2FAU8 corresponds to three flash modules of different sizes.
LE2640R2FAU highly integrates Bluetooth Low Energy radio, stack, profiles and applications in a SoC, without the need of using an external MCU. The module also offers flexible hardware interfaces and a sensor controller for the sensor application.

It enables ultra-low power connectivity and data transfer for the applications that are sensitive to power consumption, size and cost.

Key Features

- Bluetooth 5.1 single-mode compliant
- Support master and slave modes, 8 simultaneous connections in master mode
- Integrated Bluetooth Low Energy stack, no external MCU needed
- RF performance
  - TX power: -21dBm to 5dBm
  - RX sensitivity: up to -97dBm
- Communication range: 250 meters (LOS) – Long Range Mode
- Ultra low power ARM Cortex-M3 microcontroller core
- Antenna: Chip antenna or U.FL connector
- Size: 16.9 mm x 11 mm x 1.5 mm (Without Shielding)
  16.9 mm x 11 mm x 2.1 mm (With Shielding)
- Ultra low power consumption:
  - Shutdown: 100nA (Wake up on external events)
  - Standby: 1.5uA (RTC running and RAM/CPU retention)

Applications

- Medical devices
- Sports and fitness equipment
- Home electronics

- Mobile and PC accessories
- Industry automation

Device Family

There are different flavors in LE2640R2 series with two chip selections of CC2640R2F and CC2640R2L from Taxes Instruments. CC2640R2F provides a sensor controller while CC2640R2L doesn't. Also this series provides different choices for external flash on module, no external flash, 4Mbit external flash or 8Mbit external flash. There are antenna version and no-antenna version.
In antenna version, there is chip antenna or U.FL connector for external antenna. No-antenna version will have more compact dimension which is 11.6mm x 11mm x 2.1mm.

VDDS	1.8	3.3	3.8	V

5. PCB Layout Guidelines

Use the following guidelines to lay out the BLEM203(F/L/LF) device:

- The module must be placed close to the edge of the PCB.
- Leaving 5.6 mm copper clearance on all PCB layers underneath the antenna area, as shown in Figure 5-1 and Figure 5-2.
- Using a generous amount of ground vias to stitch together the ground planes on different layers. Several ground vias should be placed close to the exposed ground pads of the module.
- No external decoupling is required.
- The reset line should have an external pullup resistor unless the line is actively driven. Placement of this component is not critical.
- Leaving a clearance in the top-side copper plane underneath the RF test pads.
